Interstice

Your AI Company, On Your Wrist

Speak a command. A team of AI agents that remember, communicate, and evolve handles the rest while you live your life.

Varun Kalvakota · Veer Saraf

HackHayward 2026 — AI-Driven Entrepreneurship

THE PROBLEM

You're doing five jobs.

AI tools still make you the bottleneck.

- **Research** — You Google it, read 20 tabs, summarize it yourself.
- **Outreach** — You draft every email, personalize each one manually.
- **Development** — You build the landing page, write the copy, deploy it.
- **Calls** — You make every follow-up call personally.
- **Coordination** — You are the glue holding everything together.

Every AI tool replaced the keyboard with a chatbox — but kept the bottleneck: you.

THE SOLUTION

Speak. *Delegate.* Done.

1

You speak

Voice command via OMI wearable

›

2

CEO hears

AI CEO decomposes into subtasks

›

3

Agents run

Research, Comms, Dev execute in parallel

›

4

They talk

Agents share findings & collaborate mid-task

›

5

CEO reports

Synthesized result back through your wrist

Not a chatbot wrapper. A real AI company with an org chart, memory, and delegation.

OMI · Perplexity Agent API · ElevenLabs · Convex · Claude · Twilio

THIS ISN'T AN API CALL

Five moats that make this a company, not a wrapper.

01	**Persistent Sessions**	Agents resume via --resume. They remember everything across heartbeats.
02	**Inter-Agent Comms**	Real-time message bus. Research feeds Dev and Comms mid-task.
03	**4-Layer Memory**	Company memory, contacts, per-agent memory, shared findings channel.
04	**Background Execution**	Heartbeat scheduler + approval gates. They work while you live.
05	**Wearable-Native**	OMI in, OMI out. Run your company from your wrist.

The judging criteria asks: "Is it more than a basic API call?" This is our answer.

MEMORY

A company brain that never forgets.

Company Memory

Shared file all agents read & write.
Identity, decisions, activity log.
“Email Veer what we did today”
— it already knows.

Contact Memory

A CRM that builds itself from voice.
Names, numbers, emails, history.
Say a name — it knows who they are
and what you last discussed.

Per-Agent Memory

Each agent carries its own memory
via --resume sessions. Research knows
your market. Comms knows your voice.
Dev knows your stack.

Shared Findings

Research posts to a shared channel.
Every agent reads it instantly.
Competitor raises $50M? The entire
company knows in seconds.

“The company gets smarter every day — without retraining.”

POWERED BY PERPLEXITY

Not basic search.
Autonomous research missions.

Agent API Capabilities

- Agent API endpoint — not basic Sonar
- Deep Research preset: 10 autonomous steps
- Structured JSON outputs (schema-enforced)
- Domain filtering (Crunchbase, LinkedIn)
- web_search + fetch_url built-in tools
- Multi-model: Claude Opus, GPT-5, Grok
- Results consumed by other agents as data

In Practice

1. "Find 10 AI wearable investors in the Bay Area"
2. Agent API runs deep-research (10 autonomous steps)
3. Searches Crunchbase, LinkedIn — reads full pages
4. Returns structured JSON: name, firm, email, relevance
5. Comms Agent reads JSON → drafts 10 personalized emails
6. Approval gates → you approve each send

Not search. An autonomous research department.

POWERED BY ELEVENLABS

Not text-to-speech.
Real AI phone calls.

Call Agent Capabilities

- Conversational AI 2.0 — not scripted TTS
- Native Twilio integration for outbound calls
- Sub-100ms turn-taking, natural conversation
- Server tools: queries Convex mid-call
- Reads company memory during live calls
- 32+ language auto-detection

The Demo Moment

"Call Veer and give him a status update on what we accomplished today."

- Call Agent reads company memory
- Generates contextual script from today's data
- Approval card → you approve
- A real phone rings. Real conversation.
- Transcript streams live on dashboard

A real phone call, mid-demo. That's not a feature. That's a statement.

Live Demo

Watch the agents work in real time.

Command 1 *"Find investors, build a landing page, draft outreach emails."*

Command 2 *"Call Veer and update him on what we accomplished today."*

MARKET OPPORTUNITY

Two massive markets.
We sit at the intersection.

AI Agent Orchestration

$8.5B 2026

→ *$35B by 2030*

CAGR ~42%

AI Wearable Devices

$50B 2026

→ *$200B+ by 2030*

CAGR ~25%

Interstice = orchestration layer for wearable hardware. No one else sits here.

COMPETITIVE LANDSCAPE

We win every row.

	ChatGPT / Copilot	CrewAI / LangChain	Interstice
Persistent Memory	Session only	Stateless API	✓ --resume sessions
Inter-Agent Comms	Single agent	Basic handoff	✓ Real-time msg bus
Background Work	Tab open required	Script-based	✓ Heartbeat scheduler
Human-in-the-Loop	Always or never	Manual gates	✓ Approval + voice
Hardware	None	None	✓ OMI wearable
Knowledge	Resets	Resets	✓ Compounds daily

THE TEAM

Two people. One AI company running autonomously.

Veer Saraf

Engineering

- Built the entire system in 24 hours
- Claude CLI subprocess runner w/ session persistence
- Convex real-time backend + heartbeat scheduler
- Inter-agent message bus architecture
- Perplexity, ElevenLabs, OMI, Twilio integrations

Varun Kalvakota

Strategy & Pitch

- Product positioning & market strategy
- Competitive analysis & moat identification
- Go-to-market & customer segmentation
- Pitch design & demo narrative
- The voice you're hearing right now

That's the proof of concept — two people running an AI-powered company.

Inter*stice*

The space between what you want and what gets done.

We filled it.
